

# GARDENBAC

## Why is **Gardenbac™** needed?

- Deteriorating soil health
- Increased compaction
- Loss of soil structure
- Excess chemical stimulation

## How does **Gardenbac™** help?

These naturally occurring organisms enhance the microbiome to free up nutrients in the soil making them available to plants as microorganisms in soil break down plant matter freeing up nutrients.

These unique strains of *Bacillus subtilis* B5000h™, B5005h™, B5150h™ are proven pathogen inhibitors.

Priority's commitment to animal health is part of a 20-year legacy, empowering animal health and wellness with microbiology and nutrition. This commitment to improve health through microbiology is now drawing to the source, meeting the request of those who cultivate and care for the land to create something to restore the garden soil.

Bountiful harvests, nutritious feeds, and rejuvenating the microbiome of the soil is the intent of **Gardenbac™**.

Providing naturally occurring microorganisms that originate from the Earth, Priority is empowering the soil.

– *For Healthy Plants™ For Healthy Soil™*

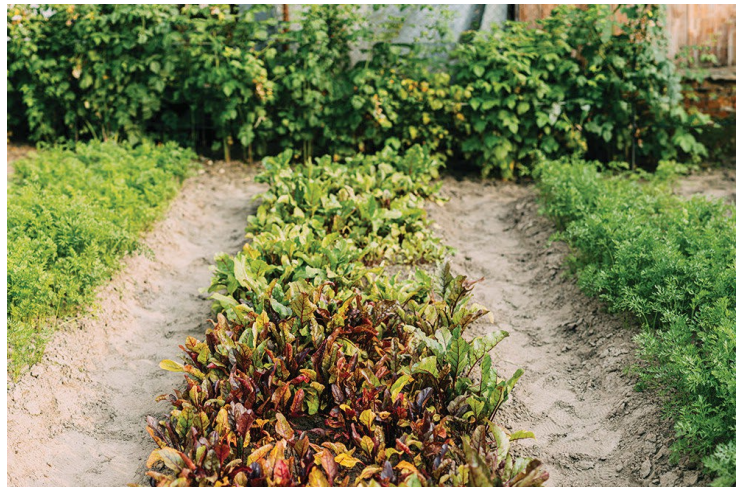

**Gardenbac™** Contains a source of live (viable) naturally occurring microorganisms

### Ingredients:

Calcium carbonate, dried *Bacillus subtilis* fermentation products

### Directions for Use

- Apply weekly minimum 1 scoop per sq. ft.
- Do not mix directly with fertilizer.
- Store at room temperature
